# WHERE TO START WITH MY COURSES

I've been teaching Excel and analytics for many years, and over that time I've built a lot of content! A common question I get is simple and reasonable: "Where should I start?"

This one-page guide is meant to give you a clear starting point based on what you're trying to learn right now:

- If you're new to Excel + AI → start with **Excel Must-Knows for AI Success**
- If you want to learn Python in Excel → begin with **Python in Excel: Quick Wins**
- If you prefer structured self-paced learning → take my **LinkedIn Learning** courses
- If you want live, hands-on training → join an **Eventbrite** workshop, **O'Reilly** session, or **Global Excel Summit** masterclass
- If you want ongoing guidance without a big course → join **The Modern Excel AI Stack** (membership)

If you're still not sure which path makes the most sense for your situation, that's totally normal. **Feel free to reach out** and tell me what you're working on. I'm happy to help point you in the right direction.
